Detailed Features

Real-Time Monitoring

Continuous, automated signals for configuration and compliance events create a live audit trail and proactive governance framework. These capabilities align with best practices for continuous delivery and risk management.

Cloud Enabled

Integrates with AWS, Azure, OCI, and GCP to provide FinOps-aligned visibility into usage and entitlements. Supports cloud governance by reconciling BYOL rights and consumption against contract terms, preventing overspend and shadow IT.

Virtualization Aware

Purpose-built for VMware, Hyper-V, and Nutanix, ArxPlatform manages complex deployment models and ensures accurate license scoping in virtualized environments. This supports sustainable optimization by consolidating workloads and reducing shelfware.

Auto-Discovery

Agentless inventories run daily across infrastructure, operating systems, and databases, executing 400+ compliance checks to maintain trustworthy data. These checks validate entitlements, detect unlicensed feature use, and track lifecycle status.

Access to License Experts

Specialists provide guidance on licensing nuances across Oracle, Microsoft, IBM, and other vendors. Their expertise ensures entitlements and use rights are applied correctly, avoiding over-deployment and misinterpretation.

Comparative Pricing Advisor

Delivers value realization by benchmarking renewals, true-ups, and discounts against industry standards. This ensures procurement decisions are grounded in governance insights and tied to measurable business outcomes.

Training Programs

Empowers DBAs and IT admins with education that embeds process discipline and transformation into daily operations. Training ensures staff manage assets consistently and align with organizational governance models.

Audit Defense

Combines technical validation and legal guidance to contain scope, enforce contractual boundaries, and challenge non-contractual claims. This ensures governance and entitlements management remain defensible against vendor pressure.

Legal Services

Provides contractual oversight and negotiation support, ensuring entitlements and use rights are interpreted according to enforceable agreements. Helps organizations establish governance frameworks that stand up to audits and disputes.

Financial Guarantee

The industry's only SAM Managed Service backed by a financial guarantee, tying outcomes to measurable savings and risk reduction. This demonstrates value realization by proving ROI and protecting against unforeseen vendor claims.
